

PIXLR Tutorial Video Outline

1. Why use PIXLR? PIXLR can be used in situations where you need a fairly robust photo editor but don't have the time or ability to install software like Photoshop or GIMP, for example at public computer, a work computer, or a friend or relative's computer. Since it's web-based, PIXLR requires no installation, administrator privileges, etc.
2. Where is PIXLR? PIXLR can be found online at www.pixlr.com, specifically the PIXLR Editor web app.
3. Demonstrate that PIXLR can open up local files, just like a program that has been locally installed.
4. Demonstrate the tools that are similar to those in GIMP/Photoshop et al: text, drawing tools, layers, colors, etc.
5. Demonstrate the image resizing function, and how it differs from other photo editors.
6. Demonstrate that PIXLR has its own internal menu interface separate from the browser's menu interface.
7. Demonstrate format and destination options for file saving (e.g. BMP vs. PNG, and saving locally vs. saving to an online PIXLR account).
8. Show the warning that occurs when you try to navigate away from your browser window or tab without saving your work first.
9. Conclusion and contact information.
